Table 2--Texas State Data Center Population Estimates Program:
July 1, 1986 Estimates of the Total Population of Places
and 1980-86 Population Change for Places in Texas 13

The attached are estimates of the total population of counties and places in Texas for July 1, 1986 completed by personnel in the Department of Rural Sociology at Texas A&M University under contract to the Texas State Data Center. Estimates for age, sex, and race/ethnicity are available on a separate publication. These estimates have been reviewed by a network of reviewers from across the State and changes made in the provisional version of these estimates for several areas. In this brief report, the methodology used to prepare the estimates is described. Only a summary of the methodology is presented. Those wishing to obtain a more complete description of the estimation procedures and of the historical and sensitivity analyses used to select the methods employed in these estimates should contact program personnel in the Department of Rural Sociology at Texas A&M.

Estimation Methodology

Methodology for County Estimates

The estimates reported here for counties are the averages of estimates made using ratio-correlation and component-method II procedures. Ratio-correlation procedures utilize multiple regression techniques with the ratio of variable values for adjacent time periods rather than simply the variable values themselves being used as independent and dependent variables. After an extensive evaluation of the relative accuracy of alternative procedures (including difference-rate, ratio-correlation and rate-correlation methods) and an analysis of alternative variables, a simple ratio-correlation model was employed to complete the final estimates. This model used the variables of births, deaths, elementary school enrollment, vehicle registration, and voter registration.

The component-method II procedure employed utilized data on births, deaths and elementary school enrollment to estimate population. In this method, migration of the school-age population is assumed to be indicative of migration in the total population (with adjustments being made for the historical differences between the school-age migration rate and the total population's rate of migration). Data on public school enrollment from the Texas Education Agency and data from the Texas State Data Center's survey of private schools in Texas were used to estimate change in the school-age population. Data on institutional populations were obtained from applicable institutions, while data on other special populations, such as the military and elderly population, were obtained from the U.S. Bureau of the Census.

The average of the component-method II and ratio-correlation population estimates is used as the population estimate for July 1, 1986 with the total for all counties being controlled to the July 1, 1986 final estimate for the State obtained from the U.S. Bureau of the Census. Prior to the release of these provisional estimates, county estimates were evaluated for consistency and reasonableness by comparing them to those from the U.S. Bureau of the Census and to estimates from other State and local agencies.

Methodology for Place Estimates

For places, population estimates were made using only component-method II procedures. This is because the data necessary to implement a ratio-correlation method with acceptable levels of predictability could not be obtained. Thus, only data on births, deaths and school enrollment could be obtained for places, and no acceptable ratio-correlation model (as measured by the multiple coefficient of determination, R^2) could be developed using these three variables. In addition, the rates of error in historical simulation analyses indicated very small rates of error when component-method II procedures were employed.

To complete the estimates for places for 1986, standard component procedures were applied to 1980 Census population counts for places. In all cases, the 1980 base values used for places were those released by the Census Bureau on STF2B. County-level birth and death data for 1980-86 from the Texas Department of Health and 1980-86 data from the Texas Educational Agency on public school enrollment and from the Texas State Data Center survey of private schools on enrollment in private schools were used in this procedure. In addition, data on Medicare enrollment and on the net movement of persons from the military to the civilian population were obtained from counties from the U.S. Bureau of the Census. Values for each of these items were allocated from counties to places prior to the completion of the place estimates. Such allocation procedures were necessary because data items that were available for places (such as birth and death data) showed year-to-year fluctuations and reporting errors that made the direct use of place-level data problematic. The general allocation procedures used for these items involved population subgroups closely associated with the item being allocated (i.e., women of child-bearing age for fertility, school-age population for school enrollment, the total population for deaths, persons 65+ years of age for Medicare enrollment, and the population 14-17 years of age for net movement). The number in the appropriate subgroups for each place and the remainder of the county in each county in 1980 were survived (using state-level survival rates for 1979-81) to July 1, 1986, and the sum of the survived groups in each place and the remainder of the county were controlled to the county total for the item as reported from the appropriate agency to obtain the value for each place. Place estimates were completed for July 1, 1986 and adjusted to account for population changes due to annexations or other boundary changes (as reported by the U.S. Bureau of the Census for places of 2,500 or more population and as obtained from the Texas State Data Center boundary and annexation survey for places of less than 2,500 population).

The sum of the estimated populations for places in each county (and for that part of each county's population not living in places) were controlled to county totals to ensure consistency with the county estimates. Finally, in order to provide data for as many places as possible estimates for places incorporated after 1980 are also included. In such cases where data were not available to estimate the population of recently incorporated places using the procedures noted above population estimates for the places at the time of incorporation are used.

Comparisons to U.S. Census Bureau Estimates

The estimates presented here differ from those recently released by the U.S. Census Bureau for several reasons. First, these estimates have been made using techniques that are different than those used by the Bureau. For Texas, the Census Bureau uses an average of component-method II and the administrative records method to estimate county populations and the administrative records method only for estimating the populations of places. Because the administrative records method uses income tax data that are not available to analysts outside the Census Bureau, this technique could not be used by the Texas State Population Estimates Program. Secondly, the estimates reported in the following pages utilize more recent data than those used by the U.S. Bureau of the Census. The Census Bureau's provisional county estimates and its place-level estimates (no revisions are made by the Bureau for place-level estimates) utilize 1985 birth and death data and 1985 school enrollment and institutional data, whereas 1986 values were employed in the estimates reported here. Finally, the Census Bureau estimates do not include information of annexation and boundary changes for places of less than 2,500 people nor data on private school enrollment, whereas such information was included in the estimates completed by the Texas program. Because of these differences, the population estimates presented here and those from the U.S. Bureau of the Census are not directly comparable.

These estimates are the first series of estimates to be produced by the state program and annual estimates will be available on a yearly basis hereafter. If you have any comments concerning these estimates, please contact:
